

## Geological Survey professional paper Volume 355

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 80 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1987 Excerpt: . . . size as much as 175 mm in diameter. The subglobose spinose forms accentuate the ornament, but attain only a relatively small size; maximum as much as 90 mm in diameter. There appears to be an inverse relation between maximum size on the one hand and degree of stoutness and strength of ornamentation on the other. The suture line is relatively simple, with the first lateral lobe a little larger than the ventral lobe and asymmetrical and four to six much smaller and rather narrow additional lobes between it and the line of involution. The dorsal suture contains four slender lobes on each side of the dorsal lobe. The most distinctive characters are the nodose or spinose ornament, particularly on the midline of the venter, and the forward arching of the ribs on the venter. In this paper five species of Neogastropiles are recognized, each containing infrasubspecific...

### Reviews

*This written publication is fantastic. I am quite late in start reading this one, but better then never. You will not feel monotony at at any time of your respective time (that's what catalogues are for concerning should you ask me).*

-- **Tevin McClure**

*The book is great and fantastic. It is probably the most remarkable pdf i have got read through. You can expect to like the way the article writer compose this ebook.*

-- **Mr. Ethel Schmeler**
